NEWPORT STEAM DISTILLED WOOD TURPENTINE

You will get every property that a pure spirits of turpentine should contain, no objectional foreign matter or discoloration.

- Newport Turpentine is recognizable by its more delicate, pine-like odor and crystal clear, water-white, color. Newport Turpentine is further identified with long-lasting paint jobs, because the valuable ingredients of turpentine are more concentrated.

- Compare the smooth glass-like finish of the Newport job. Compare the mild pine scent of the paint containing Newport Turpentine. Once you do a paint job with Newport you will marvel at the difference.

Repair Floors The Paint-Point Way!

Don't Rip!!

Repair with Featheredge Floor Patch and SMOOTHING COMPOUND

Why you should use . . .

FEATHEREDGE COMPOUND

No deepening of holes or depressions is necessary, thereby saving time and labor of cutting cement.

Only material actually needed to fill cavity is used -- economy assured. Featheredge compound is good until used -- no waste.

Quick results -- domestic patches ready for use overnight, industrial patches over the weekend.

Waterproof and non-inflammable. It is elastic and durable. Can be used to level floor before laying linoleum or metal.

READY FOR USE. Anyone can apply it, just trowel it level with floor and tamp. Each can is supplied with binder that is applied with brush.

CAN ALSO BE USED FOR WOOD OR COMPOSITION FLOORS, SIDEWALKS, VAULT LIGHTS, FILLING JOINTS AND CRACKS.

*Paint Over Calcimine
Without Washing*

— ■ —

**ELIMINATE FUSS
BOTHER & EXPENSE**

— ■ —

In White and Colors at the Same Price.

For going over old calcimined surfaces without washing or other preparations such as shellacking or sizing. REDIKAL Paint derives its non-penetrating properties from thermolized paint oils cooked to temperatures of more than 550 degrees to produce certain gel formations. This cooked oil, which is pasty in form, is then ground with high dry hiding pigments to form a new type of paint. The labor saving angle is being hailed by the painting contractor as judged by the tremendous sale of this item. For the owner it means cleaner speedier and in most cases better looking jobs without the usual mess that went with old methods.

PLAYING SAFE

Or taking
the Consequences of Neglect

The Importance of coating every kind of Roof is overlooked by the majority of property owners.

It costs only one-half cent a square foot to coat smooth surfaced roofs and about one cent per square foot for tar or gravel roofs.

Durability Roof Coating is a long lasting material of tested ingredients.

Durability Roof Coating is applied with a brush. A long handled brush is best as it saves time and energy.

TO COAT GRAVEL OR SLAG ROOFS.

Sweep the loose gravel or dirt into piles. Paint the roof with *Durability Roof Coating*. As you finish painting each section of the roof, sweep the gravel back into its old place.

It pays to protect the roof by painting it with *Durability Roof Coating*. The cost is trifling, and the protection it affords cannot be dispensed with.

Barrels of 50 gallons.....	60c. per gal.
One-half barrel containing 30 gals.....	70c. per gal.
In 5 gallon cans.....	75c. per gal.
Single gallons.....	75c. per gal.

DURABILITY ROOF COATING

for TIN, TAR and GRAVEL ROOFS

Based on a quarter of a century of actual use. Has proven to be the finest material for coating Tin, Tar, Gravel or Slag Roofs.

Possesses high penetrative quality. Does not peel, crack or scale. Absolute sun-proof and unmeltable.

One gallon of DURABILITY ROOF COATING will cover fifty to sixty square feet of Gravel or Slag Roofing, 150 square feet Tin and 100 square feet on Rubberoid.

THE APPLICATION ON GRAVEL OR SLAG ROOFS IS VERY SIMPLE

The loose Gravel or Slag is swept into heaps with an ordinary broom and DURABILITY ROOF COATING is applied over the entire surface with a long-handled Roofing Brush. As you finish painting each section of the roof, sweep the Gravel or Slag back into its old place. The Gravel or Slag that is solidly imbedded is not disturbed at all.

Barrels of 50 gallons.....	\$0.60 per gal.
One-half barrel containing 30 gallons.....	.70 per gal.
In 5 gallon cans.....	.75 per gal.
Single Gallons.....	1.00 per gal.

PROMPT DELIVERIES EVERYWHERE

A scientific advance in roof protection Colloidal Fibrous Roof Coating

● Composed of selected Asbestos Fibre held in Colloidal state by a heavy-bodied medium to be used on roofs in an especially bad condition. ● Adapted for Composition, Tar, Gravel, Shingle or Metal Roofs. ● The difficulty of finding small leaks is obviated because the **Colloidal Coating** is sufficiently heavy to seal them effectively. ● The covering capacity is from fifty to sixty square feet to the gallon.
